

## Ever wonder if it's worth it to use a crash-tested safety seat for your child?

The photos below show a side-impact crash test at 32 km/h (almost 20 mph), striking on the driver's side, with a seat attached with the shoulder-lap belt. See what happens in 167 milliseconds into the crash. Would you want your child riding at such risk?

Before the side impact

167 milliseconds after the side-impact crash test
